Datacon Mobile Debuts Soon

by Buddy Kurz and Ramon Garcia

Your Datacon database is now available from your mobile device such as your iPad, iPhone, tablet or smartphone.

We are pleased to announce a new option that we believe will be getting everyone excited: Mobile is here! The data that your office has been diligently recording into your Datacon system is now accessible from any mobile device.

Your Mac server is now capable of hosting a secure web site designed to be accessed by the doctors and staff. You can use your iPad, iPhone or other mobile device to log onto your system and look up information about your schedule, patients, accounts and financial status.

The purpose is to allow providers access to patient data from anywhere using any mobile platform.

For several years, we have been encouraging our clients to upgrade their old servers to modern Apple systems. There are several reasons for this including speed, reliability, additional print and backup options, and the ability to utilize these servers as hosts for X-rays and images stored by XDR, Dexis, Schick, and any number of other clinical packages. One of the biggest benefits to using these servers is the possibility of bringing more sophisticated options to our users.

The latest option we are providing is the ability to disseminate information from your database to your mobile devices.

Like most areas of your system, Datacon Mobile is highly customizable. In addition to the built-in standard functions you will be able to preset custom reports or information you wish to see and access it anytime, anywhere.
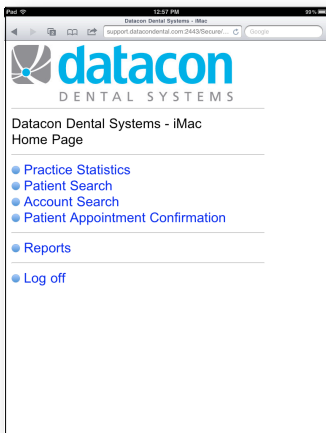

Standard functions include the following:
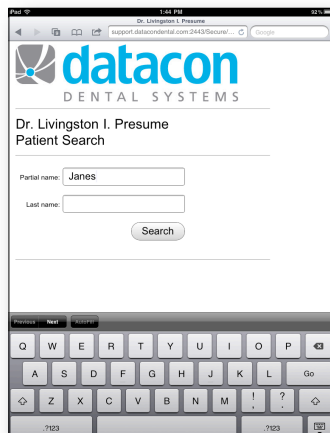

Patient Appointment Confirmation

- This page shows a week beginning today with the number of appointments on each day.

- Selecting a day shows a list of who is coming in that day with appointment time, duration, contact number and confirmation status.

- Selecting an appointment shows more details, ▶▶▶
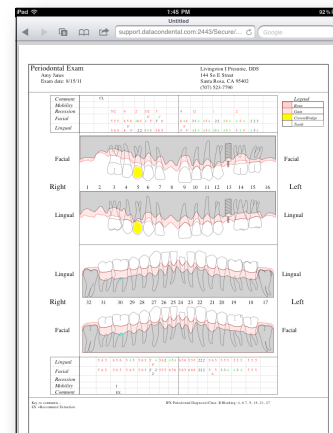

iPad and iPhone screenshots:

Customizable home screen

Interactive keyboard search screen

Patient/Account screen

View recent perio charts in PDF format

▶▶▶ Datacon Mobile

allows the appointment to be confirmed and allows notes to be added to the appointment.

- Patient and account details are accessible from the appointment.

Patient Search

- This page allows either the last name or any part of a name to be entered.
- The search result is a list of matching patient names showing the last treatment date and contact phone number.
- When a patient is selected, details include access to the account, address, phone numbers, eMail address, notes, and the patient photo.
- If a perio exam is on file, the most recent date is shown and selecting the date shows the exam report.

Account Search

- This page allows either the last name or any part of a name to be entered.
- The search result is a list of matching account names showing the account balances and phone numbers.
- When an account is selected, details include address, phone numbers, eMail address, account aging and notes..

Recent Patients for Producer

- A list of active producers showing which days that producer saw patients.
- Select a producer to show a week ending today showing the number of patients seen.
- Select a day to see a list of patients seen that day with name and contact number shown.
- Select a patient to see more contact information and treatment details.

Producer Schedule Review

- A list of active producers showing which days that producer has patients scheduled.

- Select a producer to show a week beginning today showing the number of patients scheduled and the hours the producer is scheduled.
- Select a day to see a list of patients scheduled that day with name, appointment time, contact number, and confirmation status shown.
- Select a patient to see appointment details.

Practice Summary Report

- This selection shows a monthly practice summary report for this year to date.

Practice Statistics

- This selection shows practice statistics and amounts receivable.

And More...

When viewing a phone number on your iPhone, touching the number allows it to be dialed. Touching an address brings up the map application. Touching an eMail address opens a new eMail to the patient. If a patient has texting enabled, a touch will bring up the Message app. Note areas on web pages are customizable. This means we can display just about anything you like on a patient, account, or appointment web page.

When Can I Get This?

We will be ready to roll this out to our clients soon after the CDA show. Contact us to let us know if you want this feature activated within your database. We will put you on a list and contact you as soon as we are ready to roll out.

How do I get this?

The software and installation are included in the price of your upgrade to a Mac server.

Your system will require some customization which will be billable at our standard hourly rate.

Are You Going?

cda PRESENTS
